

Our amazing body

Skeletal system

What are functions of our skeletal system?

- The organ systems of our body carry out many important Jobs to keep us alive. The skeletal system is one of our many organ systems.

Our skeletal system:

- **Supports** our body
- Gives our body shape
- Protects the delicate organs in our body

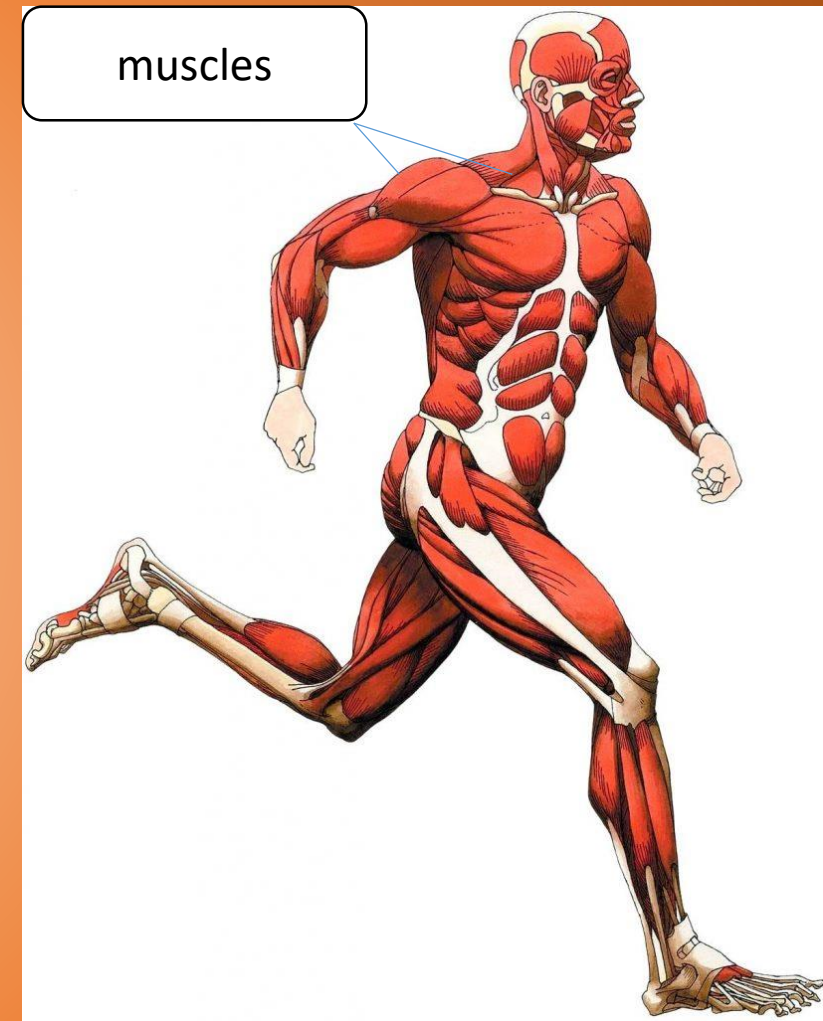

Muscular system

What is the function of our muscular system?

- We make use of our muscles when we walk, run and jump. Our muscles are part of our muscular system.

Our muscular system:

- Allows us to move different parts of our body

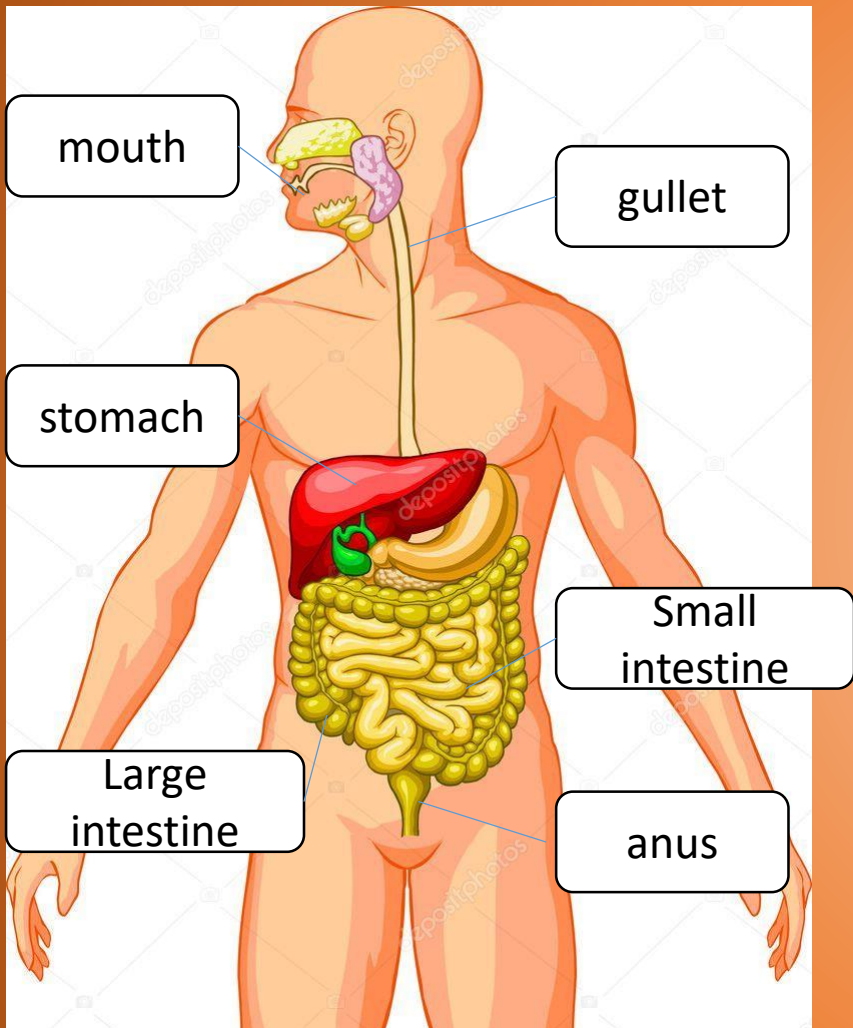

Digestive system

What is the function of our digestive system?

- We eat food to keep us alive. However, our body cannot use the food we eat as it is.

Our digestive system:

- Breaks down the food we eat into substances that our body can use.

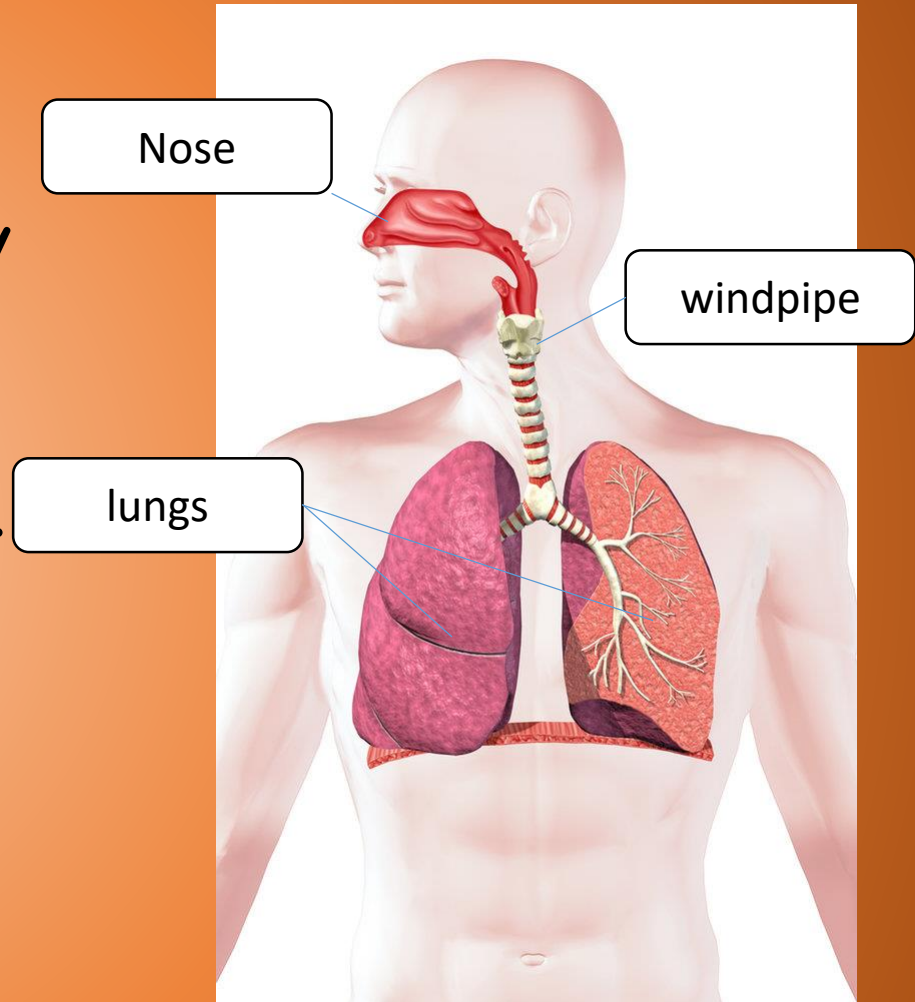

Respiratory system

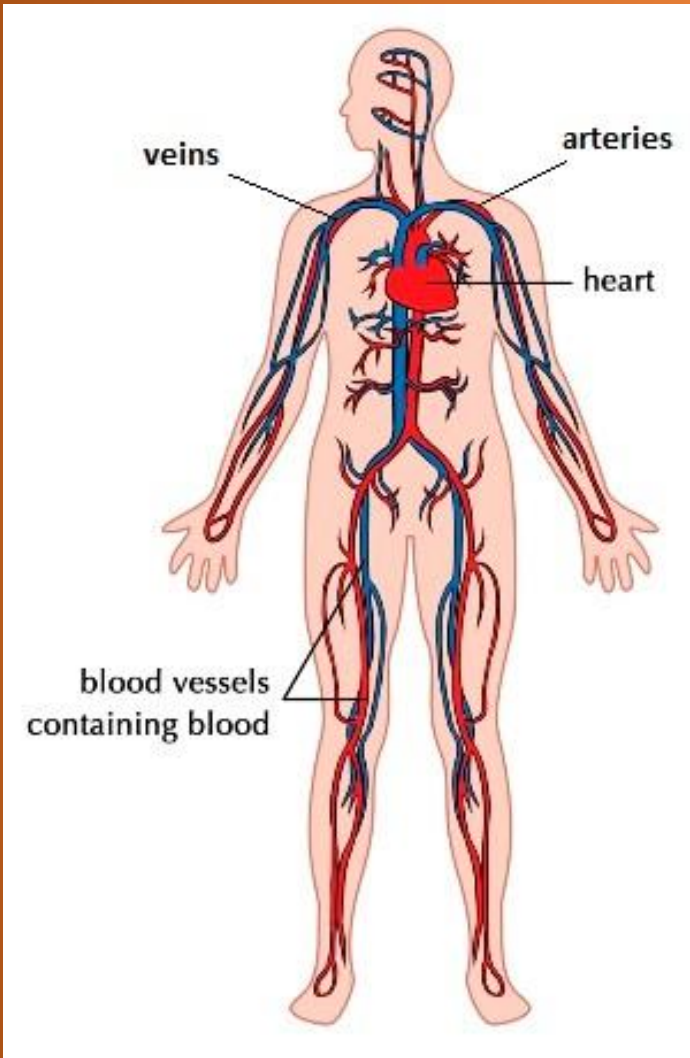

What are the functions of our respiratory system?

- The parts of our body that help us to breathe make up our respiratory system.

Our respiratory system:

- Takes air into our body
- Removes air from our body

Circulatory system

What are the functions of our circulatory system?

- Our circulatory system is made up of parts that help to move materials around our body

Our circulatory system:

- Carries useful substances to all parts of our body
- carries waste materials away from all parts of our body

Nervous system

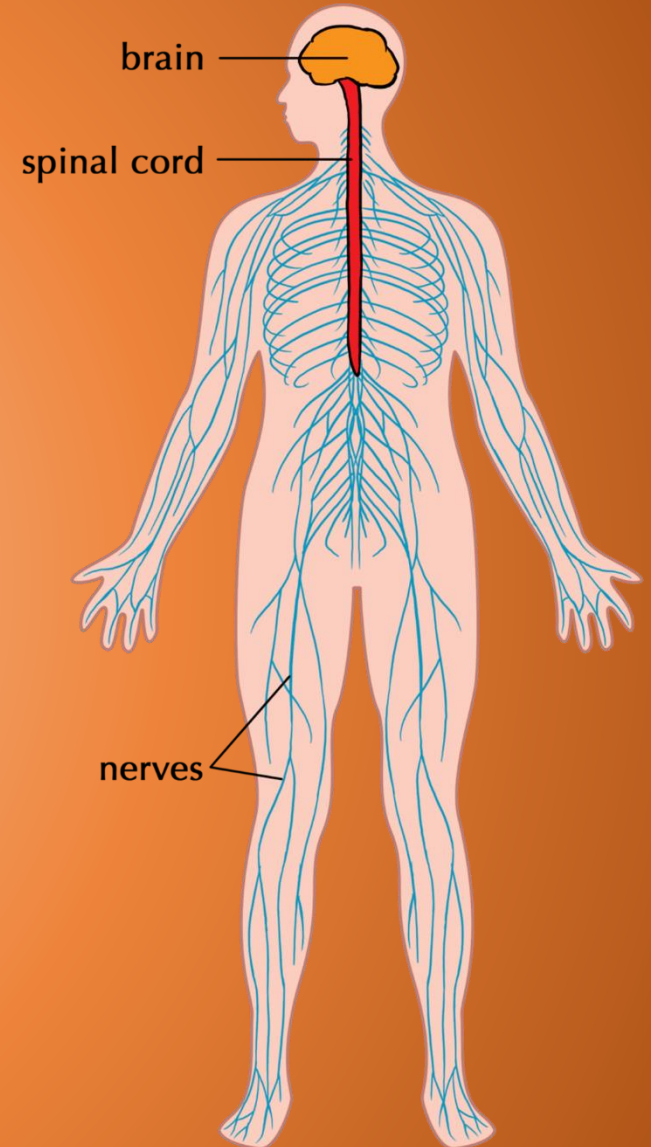

What are the functions of our nervous system?

- Our nervous system is the control centre of our body.

Our nervous system:

- Carries messages to and from different parts of our body
- Controls activities inside and outside our body

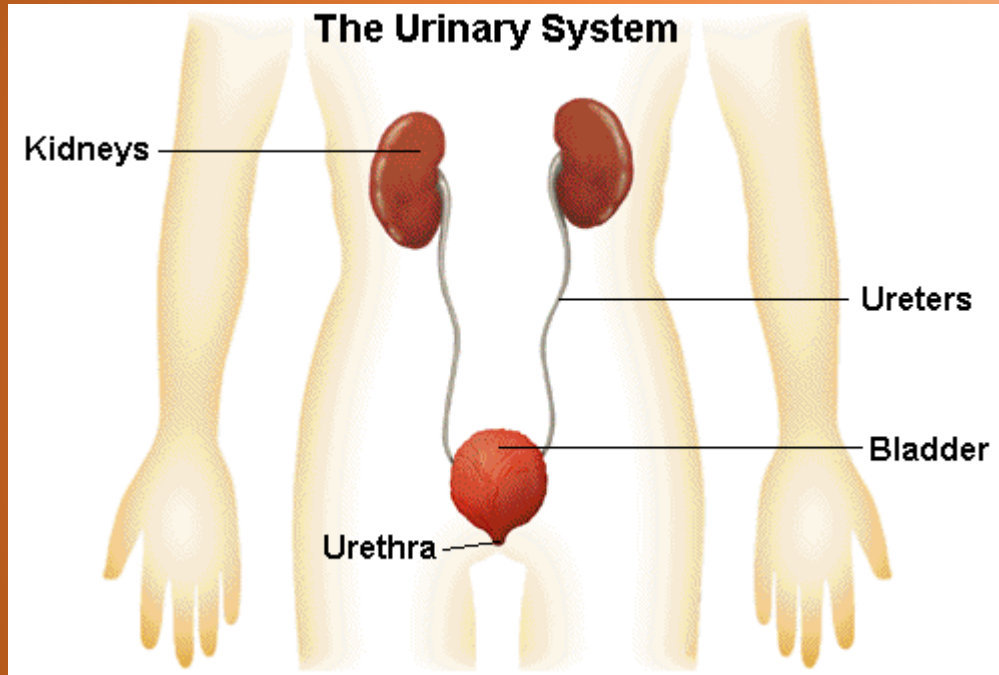

Our brain is part of our nervous system. When we carry out an activity, our brain sends messages to tell different parts of our body what to do.

Urinary system

What are the functions of our urinary system?

- Our body needs water to keep us alive. However our body also needs to remove the extra waste that it does not need.

Our urinary system:

- Removes the extra water from our body.
- Removes waste materials from our body.
